

Fisheries Management Training Prospectus 2017

Welcome to the 2017 prospectus for training events in fishery management in Scotland. This is an informal resource which highlights training events planned for 2017 and organised by Fisheries Management Scotland, Scottish Fisheries Co-ordination Centre and the Institute of Fishery Management (Scottish Branch). It includes finalised events, where interested individuals may reserve a place, and provisional events, where you may wish to express an interest. If you wish to reserve a place or express interest, please email the relevant contact in the last column. This prospectus will be adjusted and circulated as new events emerge, and existing events fill up. It will be circulated on an ongoing basis as this happens.

A [shared public calendar](#) of fisheries management events (including training courses, conferences and meetings) is also available. If you have any ideas for future training, please let us know. Some of the short courses and modules (for example, the rod & line module and fish diseases module) are now being tested, and they are designed to be transferrable to other areas for local delivery. Please let us know if you would like to see something similar delivered in your area.
