

The International Day of Women in Science

Alyx Rhodes, Intern, Galloway Fisheries Trust

A week after my last exam as an undergraduate at the University of Lincoln I applied for an internship in Scotland at Galloway Fisheries Trust and after making it through my interview and moving up here, one week into my job I was offered a 6 month internship to which I completed and have been offered a further three month position as an employee! I have now been working in my dream field for 7 months and it just shows what you can do if you're willing to push yourself. As the world's perspectives on women are constantly changing I think now is the best time to be working as a woman in science.

The aim of the Galloway Fisheries Trust is to restore and maintain aquatic biodiversity, particularly native fish, in Galloway by means of practical, responsible and sustainable approaches to land, water and fishery management, based on sound science, for the benefit of the community as a whole.
